

Hafnarfjörður, January 26th, 2026.

Dear customer:

It is hereby confirmed that all our production goods, are in coherence with the European Union food contact regulations including the Framework Regulation (EC)No. 1935/2004, Directive2002/72/EC. All plastic bags sold by our packaging division are also in coherence with this directive.

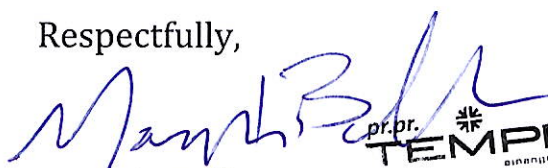

Furthermore we would like to add that our raw materials and products are generally accepted in contact with foodstuffs. According to an independent study (see Matis report 07-17), migration of substances such as styrene, benzene and toluene from our expanded polystyrene boxes to fresh fish under chilled conditions was below detection limits of 0.01 mg/kg in all the twelve samples. In comparison, the acceptable daily intake value of styrene is 90,000 mg per person per day according to FDA (US Food and Drug Administration).

A statement from our raw material supplier reads as follows; "The two product named above can be used in the storage/holding of unwrapped produce and whole fish. The components of the products are either permitted by an applicable food additive regulation under FDA, are Generally Recognized As Safe (GRAS) for use in food contact articles or if present would be expected to be below FDA's threshold of regulation."

This declaration includes all our fish boxes and products, having the following first 8 digits in the article nr.

Boxes		Lids
40342509	40462615	40342503
40402610	40604010	40402603
